

EXTERNAL AI MONITORING — LOG ENTRY •

TEMPLATE v1.0

Reference template for all External AI Monitoring logs (QashqAI Voice HQ). Each new log fills the eight sections below. Git authoritative per Doctrine #30.

└ 1. METADATA _____
Status: [Monitoring – No Public Access / Active / Resolved / ...]
Logged: [YYYY-MM-DD]
Event date: [YYYY-MM-DD]
Source: [official link]
→ [repost / community context, if any]
→ corroborated: [secondary outlets]

└ 2. EVIDENCE LEVEL _____
[e.g. Official announcement + secondary reporting;
independent validation pending.]

└ 3. EVENT _____
[What happened – vendor, models/tiers, modes, access regime,
release conditions. Observation only, no interpretation.]

└ 4. BENCHMARK (if any) _____
[Provenance caveat first – vendor-reported vs independent.]
[Figures, sorted, with comparators.]

└ 5. ASSESSMENT _____
[Evidence-based analysis. Separate signal from noise.
Flag variance, caveats, third-party evaluator findings.]

└ 6. IMPACT SCOPE _____
Infrastructure: Low / Medium / High
Governance: Low / Medium / High
Product: Low / Medium / High
Monitoring Priority: Routine / Elevated / Critical

└ 7. PROJECT POSTURE (Doctrine) _____
[Link event to relevant Doctrine(s). State operational decision.
Include "no change until ..." guards. Citation-ready lines optional.]

└ 8. REVIEW TRIGGER _____

[Reopen file on any of – list concrete events.]

NOTE (optional – separate adjacent items out of scope)

[Subject / Observation / Does NOT imply / Relevance]

Field guidance

- **Evidence Level** — make the reader instantly aware which parts rest on vendor announcement vs independent validation.
 - **Impact Scope** — fast triage classification, NOT a substitute for Assessment. Define your own Low/Medium/High thresholds once and apply them consistently across all vendors (OpenAI, Anthropic, Google, Meta, ...) for comparability.
 - **Review Trigger** — keep the file self-closing: it reopens only when one of the listed concrete events occurs.
 - **Note** — adjacent-but-out-of-scope items live here, never inside the main body.
-

Appendix A — Impact Scope Rating Guide (Template v1.0)

Apply these thresholds consistently across all vendors for archive comparability.

Infrastructure

- **Low** — No architectural change required; existing fallback layers remain sufficient.
- **Medium** — May affect deployment planning, model routing, or infrastructure strategy; monitoring or contingency planning recommended.
- **High** — Requires architectural review or changes; may affect core system resilience, portability, or vendor substitutability.

Governance

- **Low** — Minor policy or documentation implications.
- **Medium** — May require governance review or updates to operational procedures.
- **High** — Affects governance assumptions, regulatory posture, risk management, or strategic doctrine.

Product

- **Low** — No immediate impact on product capability or roadmap.
- **Medium** — May influence feature prioritization or implementation choices.
- **High** — Direct impact on product functionality, delivery, or user experience.

Monitoring Priority

- **Routine** — Periodic review only.
- **Elevated** — Reassess upon defined review triggers or significant new information.
- **Critical** — Active monitoring required due to potential near-term strategic or operational impact.
