

EXTERNAL AI MONITORING — LOG ENTRY • v1.0

Worked example for Template v1.0 — reference companion.

1. METADATA

Status: Monitoring — No Public Access
Logged: 2026-06-29
Event date: 2026-06-26
Source: OpenAI official preview (openai.com/index/previewing-gpt-5-6-sol/
→ reposted to r/Anthropic ("And it starts...")
→ corroborated: VentureBeat, OfficeChai, DataCamp, METR

2. EVIDENCE LEVEL

Official announcement + secondary reporting;
independent benchmark validation pending.

3. EVENT

OpenAI launched GPT-5.6 family — Sol (flagship) / Terra (mid) / Luna (economy)
+ new "max" reasoning effort + "ultra" subagent mode.
Access: limited preview to ~20 US-gov-approved partners. No public access,
no waitlist. Broad release "in coming weeks." Staggered at US administration
request (dual-use cyber + bio / national-security framing).

4. BENCHMARK — TerminalBench 2.1

Results are vendor-reported preview benchmarks and should not be treated as
independently validated performance.
Sol Ultra 91.9 · Sol 88.8 · Claude Mythos 5 88.0 · Terra 84.3 ·
Claude Fable 5 84.3 · GPT-5.5 83.4 · Luna 82.5 · Claude Opus 4.8 78.9 ·
Gemini 3.1 Pro Preview 70.7

5. ASSESSMENT

- Sol vs Mythos 5 (0.8 pt) → effectively within expected benchmark variance;
not a meaningful lead.
- Real signal = Sol→Sol Ultra (+3.1) from subagent parallelism (compute-for-quali
- METR: elevated "cheating" rate on agentic suites → discount interactive-harness

6. IMPACT SCOPE

Infrastructure: Medium (gated frontier; open-weight floor unaffected)
Governance: High (government-gated access pattern)
Product: Low (no QV dependency on this tier)
Monitoring Priority: Elevated (re-assess at GA)

7. PROJECT POSTURE

DOCTRINE #31 (Infrastructure Resilience / Vendor Substitutability)

Consistent with the structural pattern previously observed during the Fable 5 / Mythos 5 suspension – frontier access consolidating under government gating. Posture confirmed: no dependency on gated frontier tiers; substitutability hedge sits at the open-weight floor (cf. gpt-oss).

No architectural changes required until general availability (GA) and pricing/access policies are publicly disclosed.

Action: none. Continue monitoring for GA date + access terms.

DOCTRINE #32 (Dual-Use Risk)

Gating rationale = bio (GeneBench/SecureBio) + cyber (ExploitBench/ExploitGym).

Aligns with project's own dual-use caution framing.

Citation-ready: Government-gated frontier capability reinforces the importance of community-governed and vendor-independent infrastructure for cultural preservation systems.

└ 8. REVIEW TRIGGER (reopen file on any of) _____

- General Availability (GA)
- Public pricing disclosed
- API availability
- Independent benchmark replication

NOTE (separate item – not part of GPT-5.6 monitoring)

Subject: OpenAI Help Center – Persian (fa-ir) localization

Observation: fa-ir Help Center is documentation localization only.

Does NOT imply: Iran service support · sanctions change · API availability.

Relevance: targets Persian-speaking (diaspora) users; verify actual access terms separately before any diaspora-facing referral.
